Delta Airlines pilot dies mid-flight days after vaccination: report

A flight attendant reportedly said that earlier this month a recently vaccinated pilot flying out of Los Angeles died during a commercial flight, leading the co-pilot to make an emergency landing.

(LifeSiteNews) — A recently vaccinated pilot died during a flight, causing the co-pilot to make an emergency landing, a Delta Airlines flight attendant present for the incident said according to Dr. Jane Ruby, a former drug development expert at the Food and Drug Administration (FDA).

In an October 11 video broadcast of the Stew Peters Show, Ruby told viewers that a Delta Airlines flight attendant along with two separate whistleblowers said that earlier this month a recently vaccinated pilot flying out of Los Angeles died during a commercial flight, leading the co-pilot to make an emergency landing.

“A pilot died in-flight within the last … 10 days, according to these sources,” revealed Ruby. “The co-pilot told the flight attendant that the captain was speaking normally one moment, then … said a few weird things, then died,” she continued. “The flight had to make an emergency landing.”

Without revealing the identities of the whistleblowers, Ruby affirmed she had "vetted" the sources and confirmed their claims. She said her three sources are a Delta Airlines pilot, a Delta Airlines flight attendant who witnessed the event, and a relative of a Delta Airlines employee.

Continuing in her explanation of the events reported to her by the whistleblowing attendant, the deceased pilot was "an LAX based Captain" and the "plane was landed safely" but she is uncertain what explanation, if any, the passengers were given as to why their flight was diverted.

According to Ruby, the flight attendant was told by the co-pilot that the now-deceased captain had "completed his second shot" just "several days prior" to the tragic event.

Delta Airlines has since come out denying the incident ever took place, and according to USA TODAY stated that "the coronavirus vaccines do not cause death."

Contrasting Delta's claim that the "vaccines do not cause death" is the European Union's official data, the World Health Organization's data (WHO), and the Vaccine Adverse Event Reporting System (VAERS) database co-run by the FDA and the Centers for Disease Control and Prevention.

The WHO's database lists 2.1 million adverse effect reports related to the injections, while the European Union's data shows over 2 million injuries and at least 21,000 deaths in EU countries alone.

VAERS in America currently reports a whopping 16,000 dead Americans, with the sworn testimony of whistleblowers claiming VAERS suffers from severe underreporting and the more accurate number is a "conservative estimate" of 45,000 deaths.

Ruby added that this is just one of many suspicious events that has occurred since vaccine mandates for airlines have become almost ubiquitous, alleging that the mid-flight death is not an anomaly, but part of a larger crisis that is "much bigger than people think."

Ruby mentioned a Seattle-based pilot who was found dead from an embolism, two Atlanta-based flight attendants were found dead in their homes, one Salt Lake City pilot who suffered a breakthrough infection and died of kidney failure after being put on remdesivir, and a 47-year-old Salt Lake City flight attendant "base manager" who died suddenly.

Although Delta Airlines has not explicitly mandated the vaccine, the company did announce a vaccination program that requires unvaccinated employees to pay a $200 monthly surcharge if they are covered by the company's healthcare plan. This plan has led to a reported vaccination rate of over 90 percent companywide.

The institution of mandatory or coercive COVID-19 injection policies in the workplace has been a cause for concern in the medical community and the legal community alike.

Just last month, Dr. Peter McCullough along with more than two dozen top doctors and scientists, filed a lawsuit against the FDA to obtain the "data and information" the agency used to approve the use of the Pfizer shot despite the widespread concerns surrounding their safety and efficacy.

Lawyer Aaron Siri penned an article outlining the necessity of the lawsuit in light of the increased prevalence of vaccine mandates and vaccine coercion policies nationwide.

"Transparency demands the FDA immediately disclose the data it relied upon to license the Pfizer vaccine. Not tomorrow. Today," wrote the lawyer. "Scientists, health care professionals, and every person in this country, especially those mandated to receive this product, should have access to the data now."

"The CDC and FDA hold all the data. You don't. They hold all the data. Where's the report card? They work for us. Demand it," said Dr. McCullough, a world-renowned cardiologist and expert on the early treatment of COVID-19. "Every time you're confronted with this, 'Oh, my employer wants me to take a vaccine.' [Ask] 'Where's the report card from the CDC and FDA?' Demand a report card. Until we get transparency of data, this thing is not going to be corrected."
